

Bee Sting

1

Remove the stinger by scraping it with a credit card or the edge of a fingernail file

2 mg of every 12 hours

2

Give an average-sized cat (e.g., 10 pounds) 2 mg of Benadryl® every 12 hours

3

If there is still pain and/or swelling following removal of the stinger, apply a coldpack (wrapped in a towel) for 1-2 minutes to the site.

4

If the sting is in a sparse area from fur apply a paste of 1 tablespoon baking soda and water and dab it on the swelling

5

If the sting is in the mouth offer ice cubes for her to lick or a bowl of ice water for her to drink

6

If your cat has been stung on the tongue or inside the mouth, seek veterinary attention immediately.

DO NOT apply ice directly make sure it is wrapped in a cloth before applying to the sting site

Seek immediate veterinary care if your pet develops signs of severe allergic reaction such as: hives, severe facial swelling, breathing difficulties, vomiting & shock

If your cat has trouble breathing see a veterinarian
