

Testicular Injury

1 Muzzle your pet to prevent her from biting you as you aid her

2 If there is a scratch or abrasion on the area wash it off with contact lens solution or plain cool water with a sink sprayer

3 Apply Neosporin to the area to prevent any infection

4 Gently place a gauze pad over the area and spray the gauze pad with a sprayer filled with ice water to keep the pad soaked and cold for 10 - 30 min a few times a day

5 To make sure your cat is not licking the area you may want to put on an Elizabethan collar

6 If the injury is more severe or your cat is in pain consult a vet as soon as possible

DO NOT put an ice pack directly on the scrotum as the area is very sensitive to temperatures especially cold

Apply Neosporin a couple times a day to protect against infection
