

## Foreign Object In Nose

**1**

Make sure to muzzle your dog because they can accidentally bite you while you are trying to help them

**2**

Have someone else hold his head and talk to him in a soothing voice to keep him calm

**3**

Use your fingers or a blunt-tipped tweezer to remove the object making sure his head is held still with the hand

**4**

Clean the nostril after removing the object with a cotton ball soaked with contact lens solution

**5**

Apply some Neosporin if you see any abrasions or soreness and make sure to hold him for 1 min while the Neosporin soaks in as your dog will probably lick it off

If your dog can not stay still while holding him consult a vet to remove the object

Keep an eye out for any nasal discharge or sneezing as that can indicate something is still stuck or there's an infection and consult your vet
