

1

Sit or lay the person down, protecting them from any further injury.

2

Check and maintain airway, breathing, and circulation (ABCs) especially if the person is vomiting.

3

Seek Medical Attention Promptly and do not leave the intoxicated person alone

Make sure the person's head is tilted to the side so they do not swallow any vomit

DO NOT yell or anger the person, keep them calm and comforted

If the person is sleeping, breathing normal, and has a normal pulse you can awake them by shaking or shouting
