

Shark Bite

1

Call 911 or contact emergency medical help

2

Control bleeding by applying direct pressure

3

Provide warmth with a blanket since the victim may be cold from the water and may be suffering from hypothermia

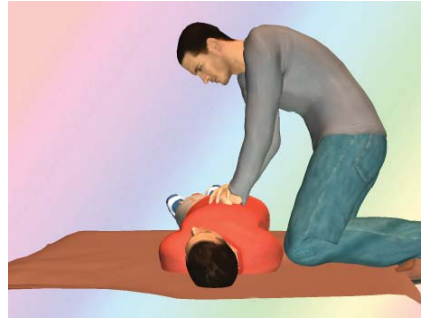

4

If a minor wound is present wash the wound with soap and water and cover it with a clean dressing and seek medical care.

5

Watch for signs of shock, as well as the person's vitals-level of consciousness, breathing and circulation.

6

Perform CPR if required.

Be aware the person may go into shock

Be aware the person may become unconscious and may need CPR

Keep the victim calm and comforted
